

Yazid AITALLALA

Mobile Application Developer

I'm a highly motivated mobile applications developer with over four years of experience, having worked on diverse projects including inventory management and point of sale applications. My goal is to secure a role within a forward-thinking company where I can apply my robust organizational and technical abilities to drive the company's success.

I'm looking for a position that not only allows me to further enhance my skills but also lets me actively contribute to the organization's objectives.

PERSONAL PROJECTS

Matima App

Project type : *Mobile Application*

Description :

Simplified smartphone interface designed specifically for elderly users with limited tech experience. Features include streamlined calling functionality, contact shortcuts, medication reminders.. The intuitive design eliminates complexity while maintaining tessential smartphone functionality to help seniors stay connected with family and friends.

Used Technologies :

Flutter, Dart, Provider, Text-to-Speech APIS.

Project QR code :

Stock mangement App

Project type : *Multi-Platform Solution*

Description :

Comprehensive stock management and distribution system developed for a leading Algerian cheese manufacturer. The Android application streamlines logistics operations for suppliers and sales representatives in the field, providing real-time inventory tracking, order processing, and delivery confirmation. The complementary web platform offers administrative controls for owners, including supplier management, product catalog maintenance, financial reporting, and distribution analytics.

Used Technologies :

Java, Android SDK, REST API, MySQL, CodeIgniter, HTML, CSS, Google Maps API, Barcode/QR scanning, PDF generation

Project QR code :

QueueMaster

Project type : *IoT Hardware-Software Solution*

Description :

Advanced queue management system designed for hospitals, government offices, and high-traffic service centers. The Flutter application provides an intuitive interface for staff to manage customer flow and displays real-time wait information on mounted screens. The system includes custom-designed Android remote controls with purpose-built PCB hardware housed in 3D-printed cases, allowing staff to call next numbers, redirect customers, and manage service points from anywhere in the facility.

Used Technologies :

Flutter, Dart, Bluetooth Low Energy, Firebase Realtime Database, Custom PCB design, 3D modeling/printing, Android SDK, WebSockets, Arduino programming
